

# ■ **EVOLUTION<sup>®</sup> X<sup>2</sup>**

***This square barreled liner could be your farm's fastest worker.***

- Proven square barrel for superior milk-out
- High-speed milking gets cows in and out fast
- Specifically engineered to maintain good teat end health
- Minimizes hyperkeratosis, mastitis and other problems
- Proven, proprietary natural rubber formulation
- Wide range of teat sizes
- Fits perfectly into stainless steel 06 style shells

# EVOLUTION<sup>®</sup> X<sup>2</sup>

**Improve teat end health  
without ever slowing down.**

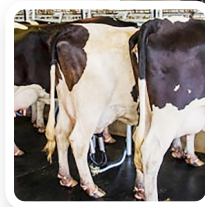

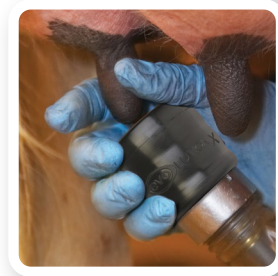

**Demand both: maximum flow and better teat end health.**

The revolutionary Evolution X<sup>2</sup> is ideal for large herd operations that want high-capacity milking with minimal down time. High capacity claw tube accommodates a wide range of teat sizes and provides greater stability to limit slippage and maximize milk flow.

The square barrel speeds the milking process and reduces costly hyperkeratosis, mastitis and other problems. With its controlled collapse, pressure on the teat is reduced and conditions are improved. Thorough removal of milk and complete, consistent massaging action make this liner a powerful choice.

**Fits stainless steel 06 style shells  
Available in long service-life style XL<sup>2</sup>**
