

• **EVOLUTION[®] XLO**

The low-slip liner for fewer fall-offs, kick-offs and squawks.

- Two-stage controlled collapse boosts stability, reduces slippage
- Low vacuum levels
- Continuous air flow up side channels to feed vacuum chamber
- Gentle massaging vacuum suction along entire length of channel reduces slippage
- Patented short milk tube for better alignment and milk flow
- Round-bore liner milks out quickly, cleanly and completely

● EVOLUTION® XLO

Stay secure with the liner that doesn't slip or twist.

Less squawking and twisting in the milking parlor.

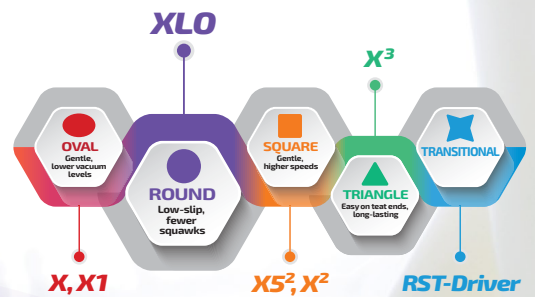

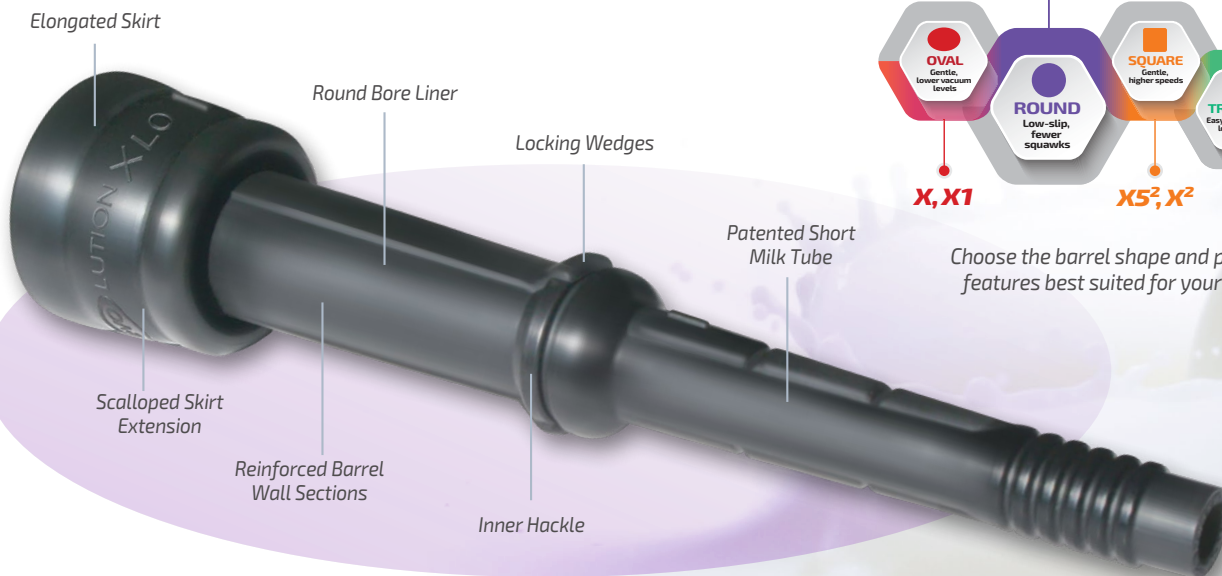

Evolution Liner's XLO is the choice to make for low-slip and maximum cow comfort in a round barrel shape with reinforced sections and a controlled collapse point. The progressive, two-stage collapse provides greater vacuum stability with virtually no slips or squawks, and better overall udder health.

The slip- and twist-resistant design improves cow comfort and reduces kicking and stepping during milking for a more complete milk flow and yield. The tube's shallow chamber is gentle yet offers high milk-flow at teat end with reduced mouthpiece vacuum.

Extended life for up to 2,500 cow milkings.

Fits stainless steel 06 style shells
