

Al Bos, Manhattan, MT

Case IH 8545 & Massey Ferguson 1839

I purchased the 8545's new and used them for 16 seasons, each tying about 400,000 bales. I installed the Skiis in those balers after 2 seasons and they made excellent balers even better. We had very few breakdowns, just had to perform routine maintenance. We bale everything from very light grass winrows to heavy alfalfa, to winrows of straw from rotary combines and get consistently well formed, tight bales which are then stacked by self-propelled bale wagons. I'm ordering 2 sets of Skiis to install in the new [MF] balers right from the get-go. Thanks again for an excellent product and your prompt service!

How much does it cost?

That depends on the make and model of your baler. Our patented BaleSkiis® Baler Liners are made to fit any model square baler from small to large 4x4x8 balers including High Density balers. Call or email us to receive price plus shipping costs. Be sure to include the make & model of your baler. If you have an extension or other special requirements, let us know and we'll make the BaleSkiis® to fit.

Hardy Stewart, Eden, WI

NH 275 Hayliner

Just wanted to drop a short note to let you know I love my BaleSkiis. I was very skeptical when I received them and realized I had just bought some molded plastic and a few bolts. However my opinion quickly changed after the first use. I baled almost 400 bales of wheat straw with no problems. I did have to loosen the tension 12 cranks to get the bales light enough to handle. My next use was alfalfa/grass hay; same result, no broken bales, no knoter problems. I was surprised I didn't have to change the tension when switching from dry straw to hay; very impressive. My customers are amazed at the difference in the quality of bales from the same baler. Thank you for a great product.

Full Money Back Guarantee

If you're not happy with the BaleSkiis® Baler Liner, you can send it back for a full refund. You can even try it for a whole season.

If you *are* happy with the BaleSkiis®, let us know! Leave a comment on our FaceBook page or send us an email. We'd love to hear from you!

Your quality and your product is first class. We purchased 2 sets of BaleSkiis from you about 7 years ago. Today, after all these years of continued use, they are as strong and in almost like-new condition. I must tell you, your product is just amazing, useful and lasting beyond expectations! It has given us consistency in bales and the increased yield just as you announce on your literature. I wish all agricultural parts/accessories would be of your honest high quality.

How do I order the BaleSkiis® Baler Liner?

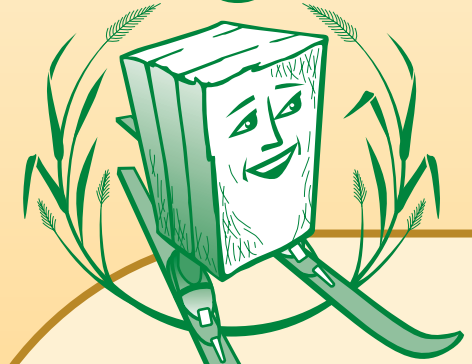

Contact us to receive price + shipping costs. Be sure to include the make and model of your baler.

Nelson Dellinger, Shelby, NC
Massey 1839 & New Holland 575

I ran about 1.5 million bales of straw and grass hay through the BaleSkiis in my Massey over 9 years for my rebaling business. That was AFTER I had put 275,000 through it in my NH 575. Over that time the chamber walls that weren't covered by the liner deteriorated & I had to weld them, but the rest of the chamber covered by the liner was fine. After 11 years I am finally buying a replacement set. I am very pleased with their product & service.

BALESKIIS

Baler Liner

Pays for itself in 2 weeks or less:

- Makes uniform compact bales for picking, stacking & transporting
- Increases RFV & forage quality
- Reduces leaf loss by 30%
- Decreases horsepower & fuel consumption
- Reduces wear, break downs & down time
- Puts more profit in your haying operation

The SMART Farmers Investment

How does it work?

The BaleSkiis® Baler Liner covers the bale-forming chamber with a specially designed, self-adjusting material and an anti-springback pattern machined into the product uniformly compresses the hay and keeps it compressed when the baler plunger retracts. This ensures a constant uniform movement and compression of hay through the bale chamber. This means that the hay is not moving back and forth in the chamber breaking leaves off stems.

- Puts more high protein leaves in the bale - not on the ground.
- Puts more pounds per acre in the bale - not on the ground.
- Stops bale chamber plugging & buildup.
- Reduces wear on both your baler and tractor.

Tests conducted by the Alberta Farm Machinery Research Center showed a 30% reduction in leaf loss!

Leland was really helpful and very honest about his product. I actually talked someone else into buying them first but after seeing the performance I knew I had to get them in my own baler. We were maxing out at 500 bales per shift, now we get 650 bales. I knew it was a good purchase after the very first bale. I think all balers should come with the BaleSkiis already installed in them.

How difficult is it to install?

It takes about 2 hours to install a complete kit in a small baler and a full day to install in a large baler. The kit comes complete with fasteners and installation instructions. You don't need to remove any of the baler's original parts.

Dwight Nyquist, Stanwood, WA
New Holland 570

I was extremely skeptical and thought, "No add-on could transform an already good baler." My baling season is over, approx. 5,000 bales, the BaleSkiis made my NH 570 a GREAT piece of machinery. I had less baler problems the entire season than I usually had in one day.

Questions and Feedback

How does it help me?

The BaleSkiis® Baler Liner stabilizes friction which results in:

- reducing the amount of tension in your bale chamber.
- reducing horsepower and fuel consumption.
- reducing knotter problems.
- reducing wear, break downs and down time.

The BaleSkiis® Baler Liner makes uniform bales in weight, length and density so:

- you can use less experienced help to run the baler.
- your picking, transporting and stacking equipment performs faster and more efficiently.
- your trucking and handling costs are reduced

This all adds up to a cost savings that eliminates frustration and increases your haying profits!

Will it work in my climate and with my kind of hay or forage?

The BaleSkiis® Baler Liner is made from a specially designed self-adjusting plastic that automatically adjusts to variations in temperature and moisture. This makes it equally dependable and successful in baling in the scorching heat of Arizona, the humidity of Florida and the cooler climates of Canada and Alaska.

Whether you're baling alfalfa in California, corn stalks in Iowa, or baleage in Wisconsin, the BaleSkiis® will produce a high quality uniform bale every time. It also extends the life of your baler by reducing wear and tear; especially with rough types of forage.

If you want to talk to someone in your area that has the BaleSkiis® installed, call us and we'll hook you up.

Brian Olson, Mt. Vernon, WA – IH 440

The BaleSkiis Baler Liner is the only thing I've ever bought that did exactly what the ad said it would. I'm a pretty mechanical person and when I saw the ad I called because I thought, "That can't be." Once I had the liner installed, I knew right away that it was a good purchase.
