

# THE BEST NATURAL NON-ANTIBIOTIC SOLUTION

Feed Additives that Support Optimal  
Intestinal Health in Animals

## Who Is Amlan International?

As the animal health business of Oil-Dri® Corporation of America, a leader in sorbent mineral technology, Amlan leverages Oil-Dri's mineral science expertise to develop proprietary, mineral-based feed additives that support optimal intestinal health while adding value for animal protein producers.

## An Optimized Gut and a Healthier Bottom Line

A healthy gastrointestinal tract supports overall animal health and welfare for ideal nutrient absorption, optimal animal performance, and improved production economics.

## The Amlan Difference

Amlan products are based on our natural mineral ingredient that contains high-capacity opal lepispheres and undergoes proprietary thermal processing specifically tailored for each of our products. We also create synergistic blends of our mineral with other feed ingredients that further support normal gut function and digestive processes.

## Natural Feed Additives Made with the World in Mind

Oil-Dri and the single-source mineral used in Amlan products are based in the USA, and because Amlan and Oil-Dri are vertically integrated, we control the quality, reliability, and safety of the mineral — from mine to feed bag. We do this by following sustainable mining practices and through the use of natural ingredients in our products.

**QUALITY &  
CONSISTENCY**

**VALUE &

**SUSTAINABLE  
PRODUCTION**

# PRODUCT PORTFOLIO

For Sale in the  
United States & Canada

## Single-Ingredient All-Natural Feed Additive for Optimizing Gut Health

- Supports optimum production economics through the maintenance of a normal healthy gut
- Contains our thermally processed calcium montmorillonite with opal-CT lepispheres
- Low-dose application for poultry, swine, aquaculture, and dairy feed

## Formulated to Naturally Support Normal Intestinal Strength in Poultry

- Supports intestinal barrier strength
- Designed specifically for poultry
- Synergistic formulation of our calcium montmorillonite, yeast cells, and a functional amino acid

## Supports Normal Gut Function When Chemicals or Ionophores are Removed

- Effective in a rotation strategy when resistance is a concern
- Supports optimal intestinal health, immune status, and overall productivity
- Contains a novel blend of phytochemicals requiring no feed withdrawal prior to slaughter
- Use in poultry and swine feed

## Supports Optimal Intestinal Health, Animal Welfare, and Economic Performance

- Helps maintain a healthy gut, supports a well-functioning immune system, and naturally encourages a strong, beneficial microbiome
- Use with antibiotics or alone in poultry and swine feed when antibiotics are removed from rations
- Proprietary blend of essential oils, medium-chain fatty acids and a thermally processed mineral

## Formulated to Naturally Support Intestinal Strength in Swine

- Supports intestinal barrier strength
- Designed specifically for swine
- Synergistic formulation of our calcium montmorillonite, yeast cells, and a functional amino acid

## Supports the Normal Intestinal Health and Vitality of Pets

- Works synergistically with the nutrition in pet diets
- Helps pets grow normally and maintain good digestive function
- Natural mineral-based feed additive that is safe, non-toxic and not chemically altered
