FOR IMMEDIATE RELEASE:

Datamars Livestock has smart solutions to help farmers, ranchers and producers ensure their livestock are secure 24/7 with the **Tru-Test Fence Monitoring System**. Solar-powered nodes placed along an electric fence line continuously monitor voltage and send automatic alerts whenever a drop in voltage is detected.

The **Tru-Test Fence Monitoring System** works with any brand of energizer. You can run up to 50 **Fence Nodes** with one **Farm Gateway** interface that collects information from the nodes, passes it through the cloud and straight to any smart device so a problem can be fixed before livestock have a chance to escape. The tough, weatherproof **Farm Gateway** attaches easily to a barn or house wall. Easy to install **Nodes** monitor up to 1,640 feet of fence line and record a measurement every two minutes. The system can be expanded to cover larger areas just by adding more nodes.

Farmers, ranchers and producers can reduce workload and time by no longer having to physically check miles of fence in any weather conditions and have peace of mind even with remote locations. With instant alerts that identify problems immediately, there is no other system for smart farming like the **Tru-Test Fence Monitoring System**.

About Datamars Livestock

Datamars Livestock is the global leader in animal identification, product performance, monitoring, animal health delivery systems, and farm infrastructure devices providing precision livestock management solutions.

Datamars Livestock includes globally recognized brands like Z Tags, Temple Tag, Tru-Test, Speedrite, Patriot, NJ Phillips and Simcro. Our products are supported by the **Datamars Livestock** cloud software solution which provides producers with real-time information about their livestock.
