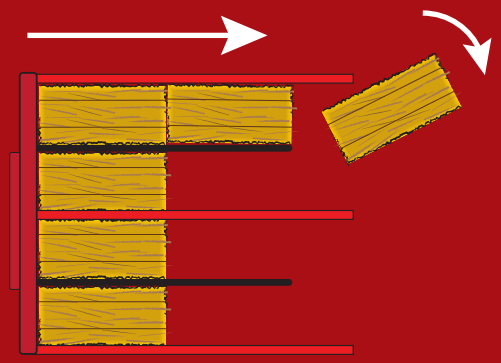
MADE IN THE USA

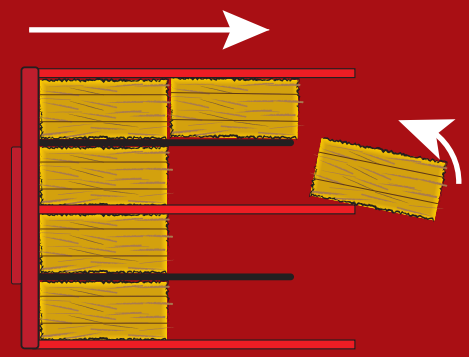
MAXILATOR™
Accumagrapple

The Maxilator Accumagrapple is truly one of a kind in that it can gather the hay from the field, load it onto a trailer or a truck and unload and reload the hay with the same piece of equipment. Our ten bale groups of hay make stacking the hay safe and secure locking them together on the trailer or in the barn. Bale size can vary from 36" to 42" with the preferred size being 39" this allows for a variance in your bale size.

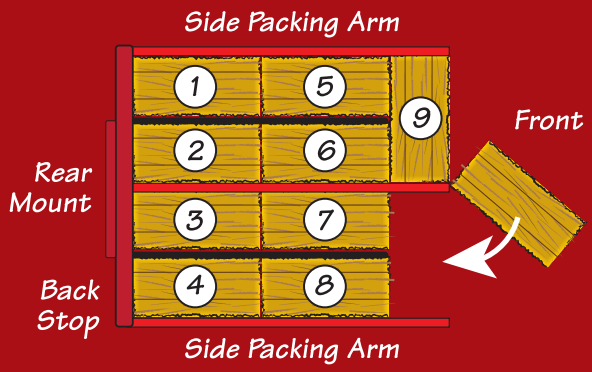
The Accumagrapple simply converts to a grapple for off loading and stacking of the hay in less than 2 minutes by removing the lock pins from the center bar and dividers and either the left or right packing arm. The grapple can be used right handed or left handed depending on which side of the trailer you unload from.



Step 1 - Position Bales, row 1



Step 2 - Position Bales, row 2



Step 3 - Position Bales, front row

Tractor or Skid Loader Requirements

There are infinite combination of tractors and front end loaders. It is important that you qualify your tractor or skid loader by consulting its operator information supplied by its manufacture to be sure it is an appropriate match for an Accumagrapple. Keep in mind you will be lifting the machine, the weight of the bales and where this will be done. Always be aware of your surroundings and move in the direction of travel at a safe speed remembering the increase length and swing radius created with the Accumagrapple tractor/skid loader combination.
