

# 5 Reasons to Process with DRMS

- 1 Participate in Progeny Testing with AI companies.**
  - PT credits can cover most of the cost of DHI testing
  - PT participants currently get \$8 for calving ease data and \$50 for milking daughter
  
- 2 Know genetic potential with PTA (Predicted Transmitting Ability) values**
  - Use PTAs with pedigrees in mating programs
  - Determine which cows to flush or cull
  - Market animals with documented performance, genetics
  - Genetically improve your herd
  
- 3 Genomic testing can be done at a lower cost for DHI herds.**
  - Determine top heifers and breed to gender selected bulls
  - Determine which heifers should be culled
  
- 4 Genomic Data automatically downloads to Dart:**
  - Loads automatically with test date updates
  - May be pulled on demand
  
- 5 Benefits of Processing with DRMS:**
  - Provides dairy data to DHIsAs, producers, veterinarians and consultants
  - Comprehensive DHI management reports to evaluate herd performance, somatic cell count, production persistency, genomic test results, sexed semen and more
  - Producers can add Dart on-farm software and the award-winning PocketDairy app for a low monthly fee rather than an up-front purchase
