

CONFIDENCE IN COMPLIANCE

NUTRIENT MANAGEMENT CONSULTING AND PLANNING PARTNERSHIPS FROM ROCK RIVER LABORATORY

The scope of the agriculture industry continues to grow and evolve as farming practices change. Farmers not only work to grow more food and fulfill new consumer food interests and demands, but also work to sustain their resources for generations to come. A vital component to owning and managing a successful farm operation by today's standards is creating and implementing a nutrient management plan. As this industry evolution continues, the need for trusted partners to help farmers remain efficient while maintaining certain stewardship principles has become apparent.

REPUTABLE PARTNERS

Reviewing permit language, advising producers, updating Nutrient Management Plans, and pulling soil samples aren't usually terms you might associate with a day in the life of a farmer. A partnership with the Rock River Laboratory NMP team can take these jobs, the entire nutrient management planning process, and agriculture regulations agency communications off your plate so you can focus on what you do best: managing your farm. The Rock River Laboratory nutrient management planning team is composed of experts who set themselves apart in the field:

- **Specialists in farm compliance:** As members of the agriculture community themselves, they are immersed and well-versed in the latest requirements for farm type and size, as well as the software and programs involved.
- **Respected reputation:** They are familiar with and have earned the respect of the faces behind the Department of Natural Resources (DNR) and Natural Resources Conservation Service (NRCS), among other agencies that regulate farm operations.
- **Understanding and communication:** On-site assessments, consultations, and constant communication not only ensures your operation stays compliant, but that our NMP team also understand your needs and keeps these in the forefront.
- **Individualized attention:** Each individual operation is a priority. With nutrient management consultation and planning as their sole focus, the Rock River Laboratory NMP team can invest their time in getting to know the ins and outs of the operation as well as forming a plan and supporting guidance that fits these individual needs and improves plan implementation.
- **Reliable support:** A quality plan for compliance is the end goal and the Rock River Laboratory NMP team stands behind the plans put in place. Understanding the delicacies of the regulations and the nature of the challenges that can arise, having a Rock River Laboratory NMP partner offers confidence in knowing your plan will hold up against such challenges.

SPECIALTIES

For over forty years, Rock River Laboratory has equipped the agriculture industry with the tools and answers they need to make decisions for successful outcomes. These tools include not only soil and fertilizer analysis services, but an experienced nutrient management planning (NMP) and consulting team as well. This specialized team's expertise combined with Rock River Laboratory's independent analysis and subsequent data provides unbiased recommendations, consultative direction, and nutrient management plans to guide Midwestern farmers down the path of compliance.

An NMP from Rock River Laboratory contains all materials needed to ensure farmers meet their local ordinance, permit, or other related statute. Our advisors specialize in the following:

- **NRCS Code 590 NMPs**
- **Comprehensive NMPs**
- **WPDES/CAFO Permitted NMPs**

CUSTOMIZED PLANNING

Rock River Laboratory's nutrient management planners work diligently to first and foremost demonstrate sustainability of your operation and ensure your operation is compliant. But in doing so, they have earned the trust and confidence of their loyal customers and built a reputation to back up their plans. See for yourself. Call Rock River Laboratory today to coordinate your next nutrient management plan.
