

# Expanded LRP Coverage for Dairy Cull Cows

Better Protection. Longer Planning Horizon.

Beef income from Cull Cows is an important part of today's dairy operation. **Livestock Risk Protection (LRP)** gives dairy producers a way to protect that revenue against falling prices.

## Available July 1, 2026: Long-Term Coverage

- Up to 52 weeks of coverage available
- This longer time frame allows producers to protect future Cull Cow revenue and better plan around herd size, replacements, and facility capacity.

## How the Price is Set

Cull Cow coverage under LRP is priced using:

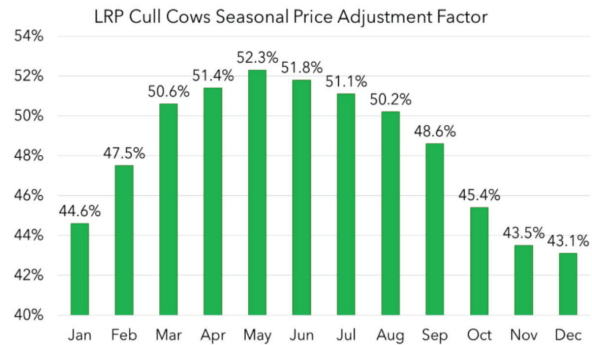

The CME Feeder Cattle market

A fixed adjustment that reflects typical Cull Cow values

Cull Cow prices have historically moved very closely with feeder cattle prices, making this a reliable and familiar market reference for price protection.

Seasonal adjustments are built in, so prices better reflect normal market patterns throughout the year.

PAFs are reviewed annually and reset each crop year beginning July 1.
